FELIXPHERE

Felixphere

A Virtual Play-To-Earn Protocol Built On BNB Smart Chain
To Bring The Wealth To You In A Myriad Of Ways

Abstract

Felixphere will harness the power of blockchain technology to provide a gaming and gambling platform built on BNB Smart Chain. The ecosystem will feature a daily lottery and simple-to-understand games that are intended to reward players. The ecosystem also features a two-layer referral system incentivized to benefit the community. \$FELIX is the native BEP20 utility token of the Felixphere ecosystem. It powers the ecosystem and gamers stand a chance to be rewarded with it by engaging the platform and its games.

1.0 Re- Introduction

Try to imagine growing up, as a teenage kid, you're home from school, done with your homework and chores for the day, and with no responsibilities left, what do you do? The same thing any kid your age would do, play games. Alone or with friends, that was a joy. Now, we don't know about you, but we miss that!

Gaming has always been an integral part of our lives, it is a way to bond and have fun, and before the really technical and complicated games existed, there was a simple pleasure in games whose understanding was ingrained in us and required little to no hardware.

Well, thanks to blockchain technology, interactive and rewarding gaming has become a thing of the present!

Now, not only can you experience the joys of gaming, but you can earn money while at it.

Play to earn (P2E) games that incentivize participation with virtual currencies or NFTs have become mainstream and are getting heavily adopted by the crypto community.

The concept has become a very integral aspect of nearly every metaverse there is and every platform presents its own unique ways to reward its users' participation. This is an aspect of the blockchain industry that doesn't need a lot of advertising because games are already fun for everyone, the added bonus of being able to earn while at it is all anyone needs to hear.

However, we realize that this new wave of complex games with really complicated rules and the heaviest hardware requirements might be a turn-off for some people. For those people who want to return to the simple times of simple games, we are here to reintroduce you to the joys of gaming with Felixphere.

FELIXPHERE

2.0 Felixphere

Ecosystem

The Felixphere ecosystem is designed to reward its users in numerous ways.

Through play-to-earn games and a daily lottery, we are presenting our users with the opportunity to gamble for a chance to earn big or even “hit a pot of gold”. There will also be a chance for users in the ecosystem to earn extra income by inviting more people to the platform.

Let's delve into the offerings of this ecosystem.

2.1 The Play-To-Earn Concept

Play-to-earn or P2E games are a type of game where people can earn digital currencies or assets by participating in games and winning. In 2013, the crypto industry witnessed the launch of the very first play-to-earn game called Huntercoin. It was launched by the Xaya team and it was structured in a way that allowed players to collect coins on a global map. The creation of this game showed that blockchain technology could impact the world of gaming and in return, gaming could become a part of the blockchain industry.

After the original game, several others sprung up as the play-to-earn sector tried to find its footing, while today we have big play-to-earn platforms dominating the market and proving what we have already concluded - that gaming will always be a major aspect of every innovation in the world.

We at Felixphere want to bring the joys of gaming to every nook and cranny of the world. We want to create an ecosystem of joy from gaming, which will of course extra income to users.

2.1.1 The Games

In the Felixphere ecosystem, we will host several easy-to-play games. There will be additions to this list of games as the platform grows and develops further. For now the games available include;

- △ Rock/Paper/Scissors: a simple and nostalgic game usually played by two people where each player forms one of the three shapes and displays it simultaneously. They can either form "rock", "paper" or "scissors". Rock trumps scissors because they can break scissors, scissors beat paper because they were created to cut paper and paper leads rock because rock can be covered with paper.
- Roll The Dice: the game is played by 2 or more players. Each player places a bet on the outcome of the roll of a pair of dice. The bet could be either over a certain amount or under a certain amount. The winner is whoever's bet is closest to the outcome of the roll.
- ✗ Tic-Tac-Toe: also known as Xs and Os, this game is for two players. At the start of the game, they each choose either an X or an O and then they take turns writing their chosen symbol on spaces in a three-by-three grid. The first player to place their letter, three in a row either horizontally, vertically, or diagonally, wins.
- Dots and Boxes: this game is also played in pairs and is similar to tic-tac-toe. There is a grid with enough dots to form at least 5 boxes. Each player takes turns drawing lines to connect the dots with the goal of completing a box and putting their initials in it. When all the boxes have been drawn and initials are written to claim ownership, whoever has the most initials down, wins.

2.1.2 The Rules

Each game has its description and requirements as stated above. However, to initiate a game or participate in an existing one on the Felixphere platform, there is a set of general rules and guidelines.

- △ First, interested players need to create a wallet and fund it with the native \$FELIX token
- △ Next, token holders will need to connect their wallets with the gaming platform.
- △ To initiate a game, you will need to set a required amount of tokens for the game. This contributes to the prize pot.
- △ When a player sees your game listed and deposits the required tokens, the game begins.
 - To join an existing game, go through the list of available games and choose one with the required amount of tokens and prize pot you're comfortable with.
 - Deposit your required quota and the game will begin.
- △ In a situation of a tie, players can decide to play again or to have their tokens returned. The decision to play again will need to be unanimous or the tokens will be returned.

P.S. Players can play the game with other popular cryptocurrencies. However, this will eventually have to be swapped for \$FELIX in the prize pot or they won't have access to any special offers or bonuses available.

The currencies accepted on the platform for games include; \$BNB, \$ETH, \$ADA, \$TRX, and \$SOL.

2.1.3 The Reward

At the beginning of every game, after the players have deposited their quota to the prize pot, Felixphere also adds a 10% bonus to the total. Meaning, that the higher the player's tokens are deposited, the more Felixphere contributes. At the end of the game, the winner takes 90% of the prize pot as their reward. The remaining 10% is distributed as cashback for wallet holders, to provide liquidity and to be added to the prize pots of future games.

Also, the interesting part of the Felixphere gaming ecosystem will be the weekly leaderboards that will turn into a monthly championship. Based on your wins from every game, you will have a rank on the leaderboard.

Don't worry! no matter your score, you'll show on the leaderboard.

To go higher in the leaderboard, you have to maintain your daily gaming streak, play and win more games than those ahead of you. At the end of each week, the top 5 gamers will be rewarded and at the end of every month, a champion as well as two runner ups will be crowned. All rewards will be in \$FELIX tokens.

P.S. If the gaming structure suspects any foul play from either or both players, the rewards are withheld until the manner is resolved. In the case of actual foul play, the prize pot is locked up and permanently removed from circulation.

2.2 Cast Your Lots

In The Lottery

Every day at 16:00 BST, lotto draws on the Felixphere ecosystem will take place. Users can buy tickets up until 15:30 every day to be able to qualify for that day's draws.

Here are the simple steps to follow;

- Create a wallet and fund it with \$FELIX tokens to be able to purchase a ticket
- Select 7 lucky numbers from the available numbers 1-70 on a board or could choose to generate a random set.
- Repeat this on as many boards as you like.
- Confirm your entry and pay.
- Sit back and see if it's your lucky day to get the pot of gold.

Like the play-to-earn games, 90% of the winnings go to the lucky participant and 10% to the Felixphere ecosystem. The lottery is designed to draw lots in a random manner and spread out so that the pot of gold gets round to every interested participant in the ecosystem in a fair way.

2.3 Referral System

We at Felixphere would like to share the joys of our ecosystem. We aim to reach as far as possible, which is why we want to enlist the help of our users. We invite everyone to join our two-layer referral program for a chance to earn great incentives.

To participate in the referral system, you have to create a unique referral ID code that can be accessed after playing 3 games on the Felixphere ecosystem. When someone uses your unique referral ID to join the ecosystem, they are registered under you.

For each game they play and win, 2% of the 10% charge on their winnings is credited to your wallet. Now, because our referral structure is of two layers when someone who was referred by you creates a referral ID, your wallet is linked to it. For every person that uses their own referral ID, you are eligible for 0.5% of the 10% charge on their referred person. To understand this better, consider this scenario;

Person A plays three games and unlocks their referral ID. Person B joins the ecosystem with Person A's referral ID, plays a game, and wins. Out of the 10% charge from your prize pot, Person A is rewarded 2%. Now, after playing three games and unlocking their own referral ID, Person B invites Person C to the ecosystem. When Person C plays and wins a game, Person B gets 2% of the 10% charge as a reward. However, because they are registered under Person A, Person A gets rewarded 0.5%. The same goes for Person B and whoever Person C refers to the ecosystem and so on.

This referral structure is just another way we want to reward our user's participation and contribution to our ecosystem. We believe that doing this will help to further spread the news about Felixphere to more people in a way that benefits our users.

2.4 Understanding

The Tokenomics

The native utility token of the Felixphere ecosystem is a BEP20 token called \$FELIX built on BNB Smart Chain.

The token powers the ecosystem and all transactions on the platform will be executed with it. For now, it can be used to participate in games, to buy tickets to participate in the lottery, and token holders will be exposed to airdrops to their wallets. Moving forward, the token will expose users to governance rights and enable them to vote on proposals put forth by the Felixphere DAO (decentralized autonomous organization). It will also have full DeFi capabilities including but not limited to, staking, lending, borrowing, pooling, and trading.

There will be 500,000,000,000 tokens available in the presale phase and a fixed total supply of 2,000,000,000,000 \$FELIX tokens which will be distributed as follows;

- ✗ 25% Presale Phases
- ✗ 25% Initial DEXs Offerings
- ✗ 20% Gaming Bonuses
- ✗ 15% Marketing
- ✗ 10% Liquidity Pool
- ✗ 5% Development Team

There will be a two-month vesting period for the tokens purchased during the presale phase during which the tokens will be locked up temporarily.

3.0 BNB Smart Chain For The Win

What Is The BNB Smart Chain?

BNB Smart Chain, which was formerly known as Binance Smart Chain is a blockchain network that supports decentralized apps (DApps) and smart contracts. BNB stands for “build and build” and it is a protocol that runs on a proof-of-stake (PoS) consensus mechanism which contributes to its high speed transaction times and low transaction fees.

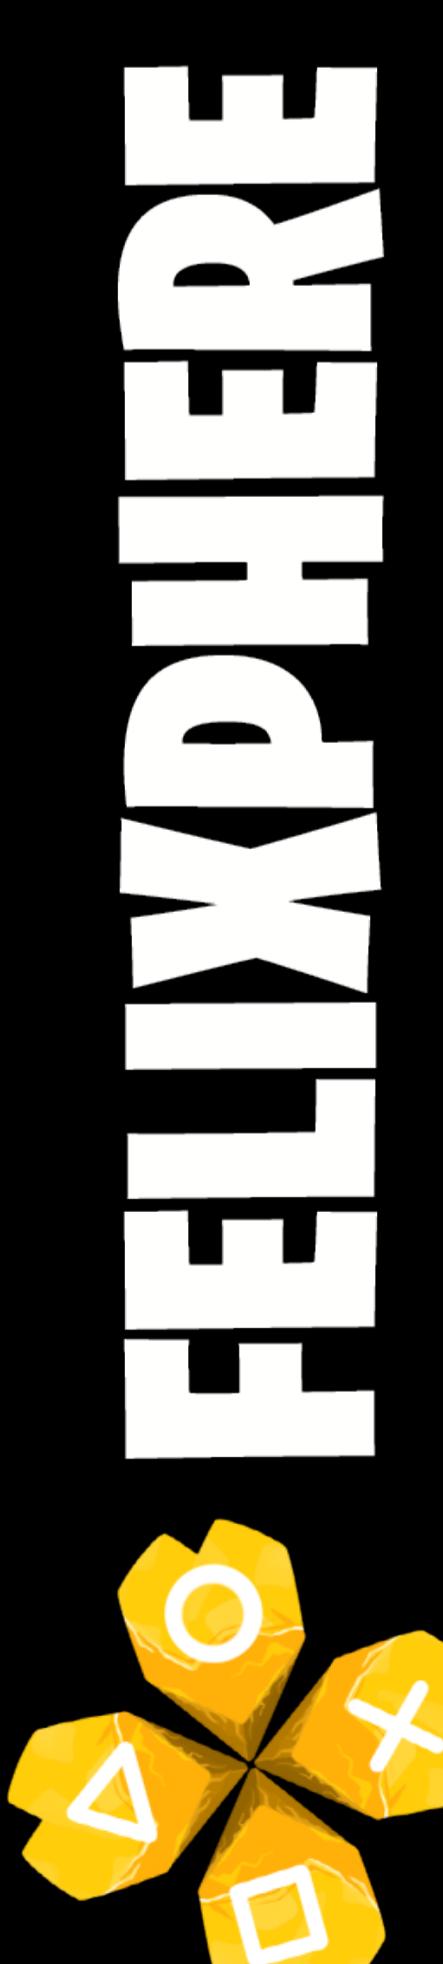

The blockchain is also EVM (Ethereum Virtual Machine) compatible which allows it to support Ethereum-based smart contracts and allows users to create DApps easily or to move them from Ethereum's blockchain. This has led to BNB Smart Chain having a wide variety of DApps and DeFi (decentralized finance) services deployed on its network. The network also supports decentralized exchanges (DEXs) like PancakeSwap, UniSwap, and BurgerSwap.

Why BNB Smart Chain?

Our goal has always been to create a community of games, fun and joy.

There are several networks we could have chosen to build our ecosystem on but with our users being our number one priority, we wanted a network that would be welcoming not only to our plans but to our people too. BNB Smart Chain is a product of one of the largest crypto exchanges globally. It is one of the fastest networks in the blockchain industry and it offers a seamless infrastructure that is not only fast and secure but also very affordable.

Operating on the proof-of-stake (PoS) consensus mechanism means that it is a more environmentally friendly and energy efficient option than networks like Ethereum and Bitcoin that operate on the proof-of-work (PoW) consensus mechanism. What this means for our players is high speeds during game play and subsequently high transaction completion times. Building on the BNB Smart Chain also means that our ecosystem benefits from the high security of the chain. This means that for our users, their assets are safe and there's a reduced risk of cyber theft or fraud.

Also, because the chain operates on the proof-of-stake (Pos) consensus mechanism, our plans to include Felixphere Staking in our ecosystem will be possible. In the future, users will be able to stake their tokens to support the integrity of the network and earn extra income while at it. To cap this all off, our users will also benefit from the cheap transaction costs that are made possible by the BNB Smart Chain which will lead to them enjoying more of their winnings.

This is what led us to our choice of the BNB Smart Chain as the appropriate network for the Felixphere ecosystem.

4.0 Journey To The Future

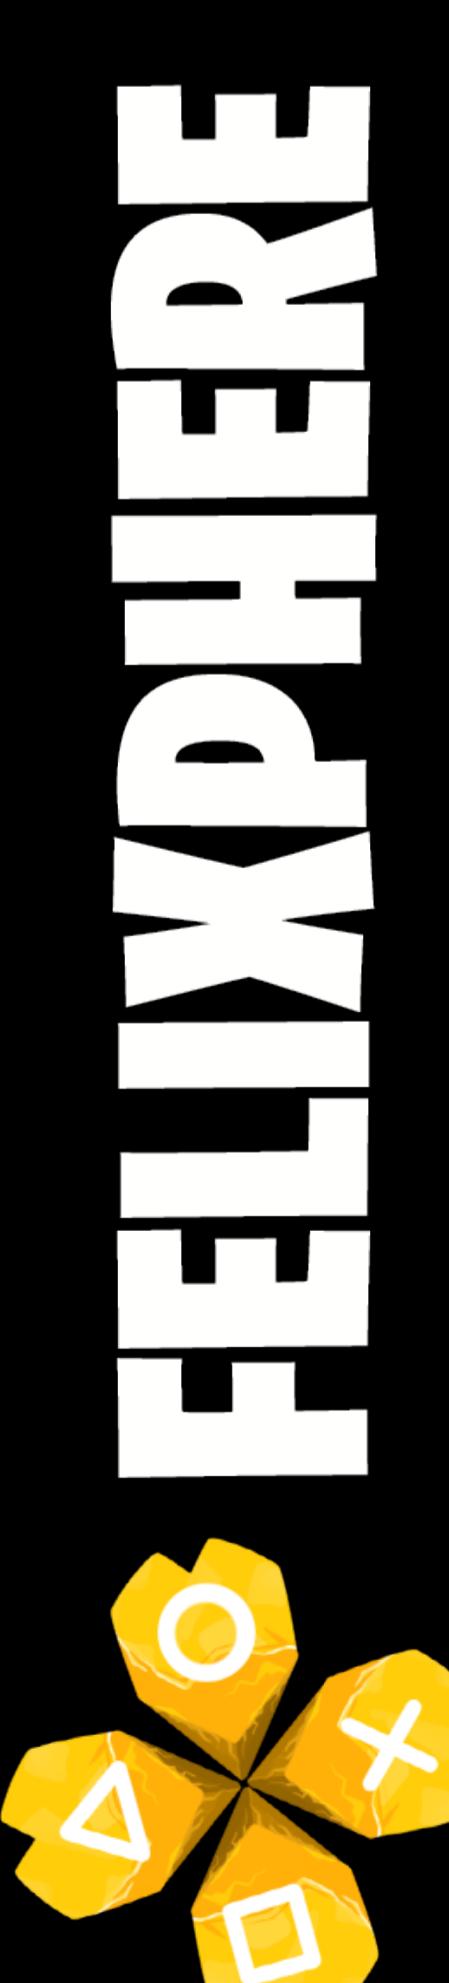

We wish to create an ecosystem where people can experience the simple pleasures of life again.

We want Felixphere to be a space where friends and strangers alike can bond over fun games that take them back to their childhood and possibly give them a little escape from the current routines and realities.

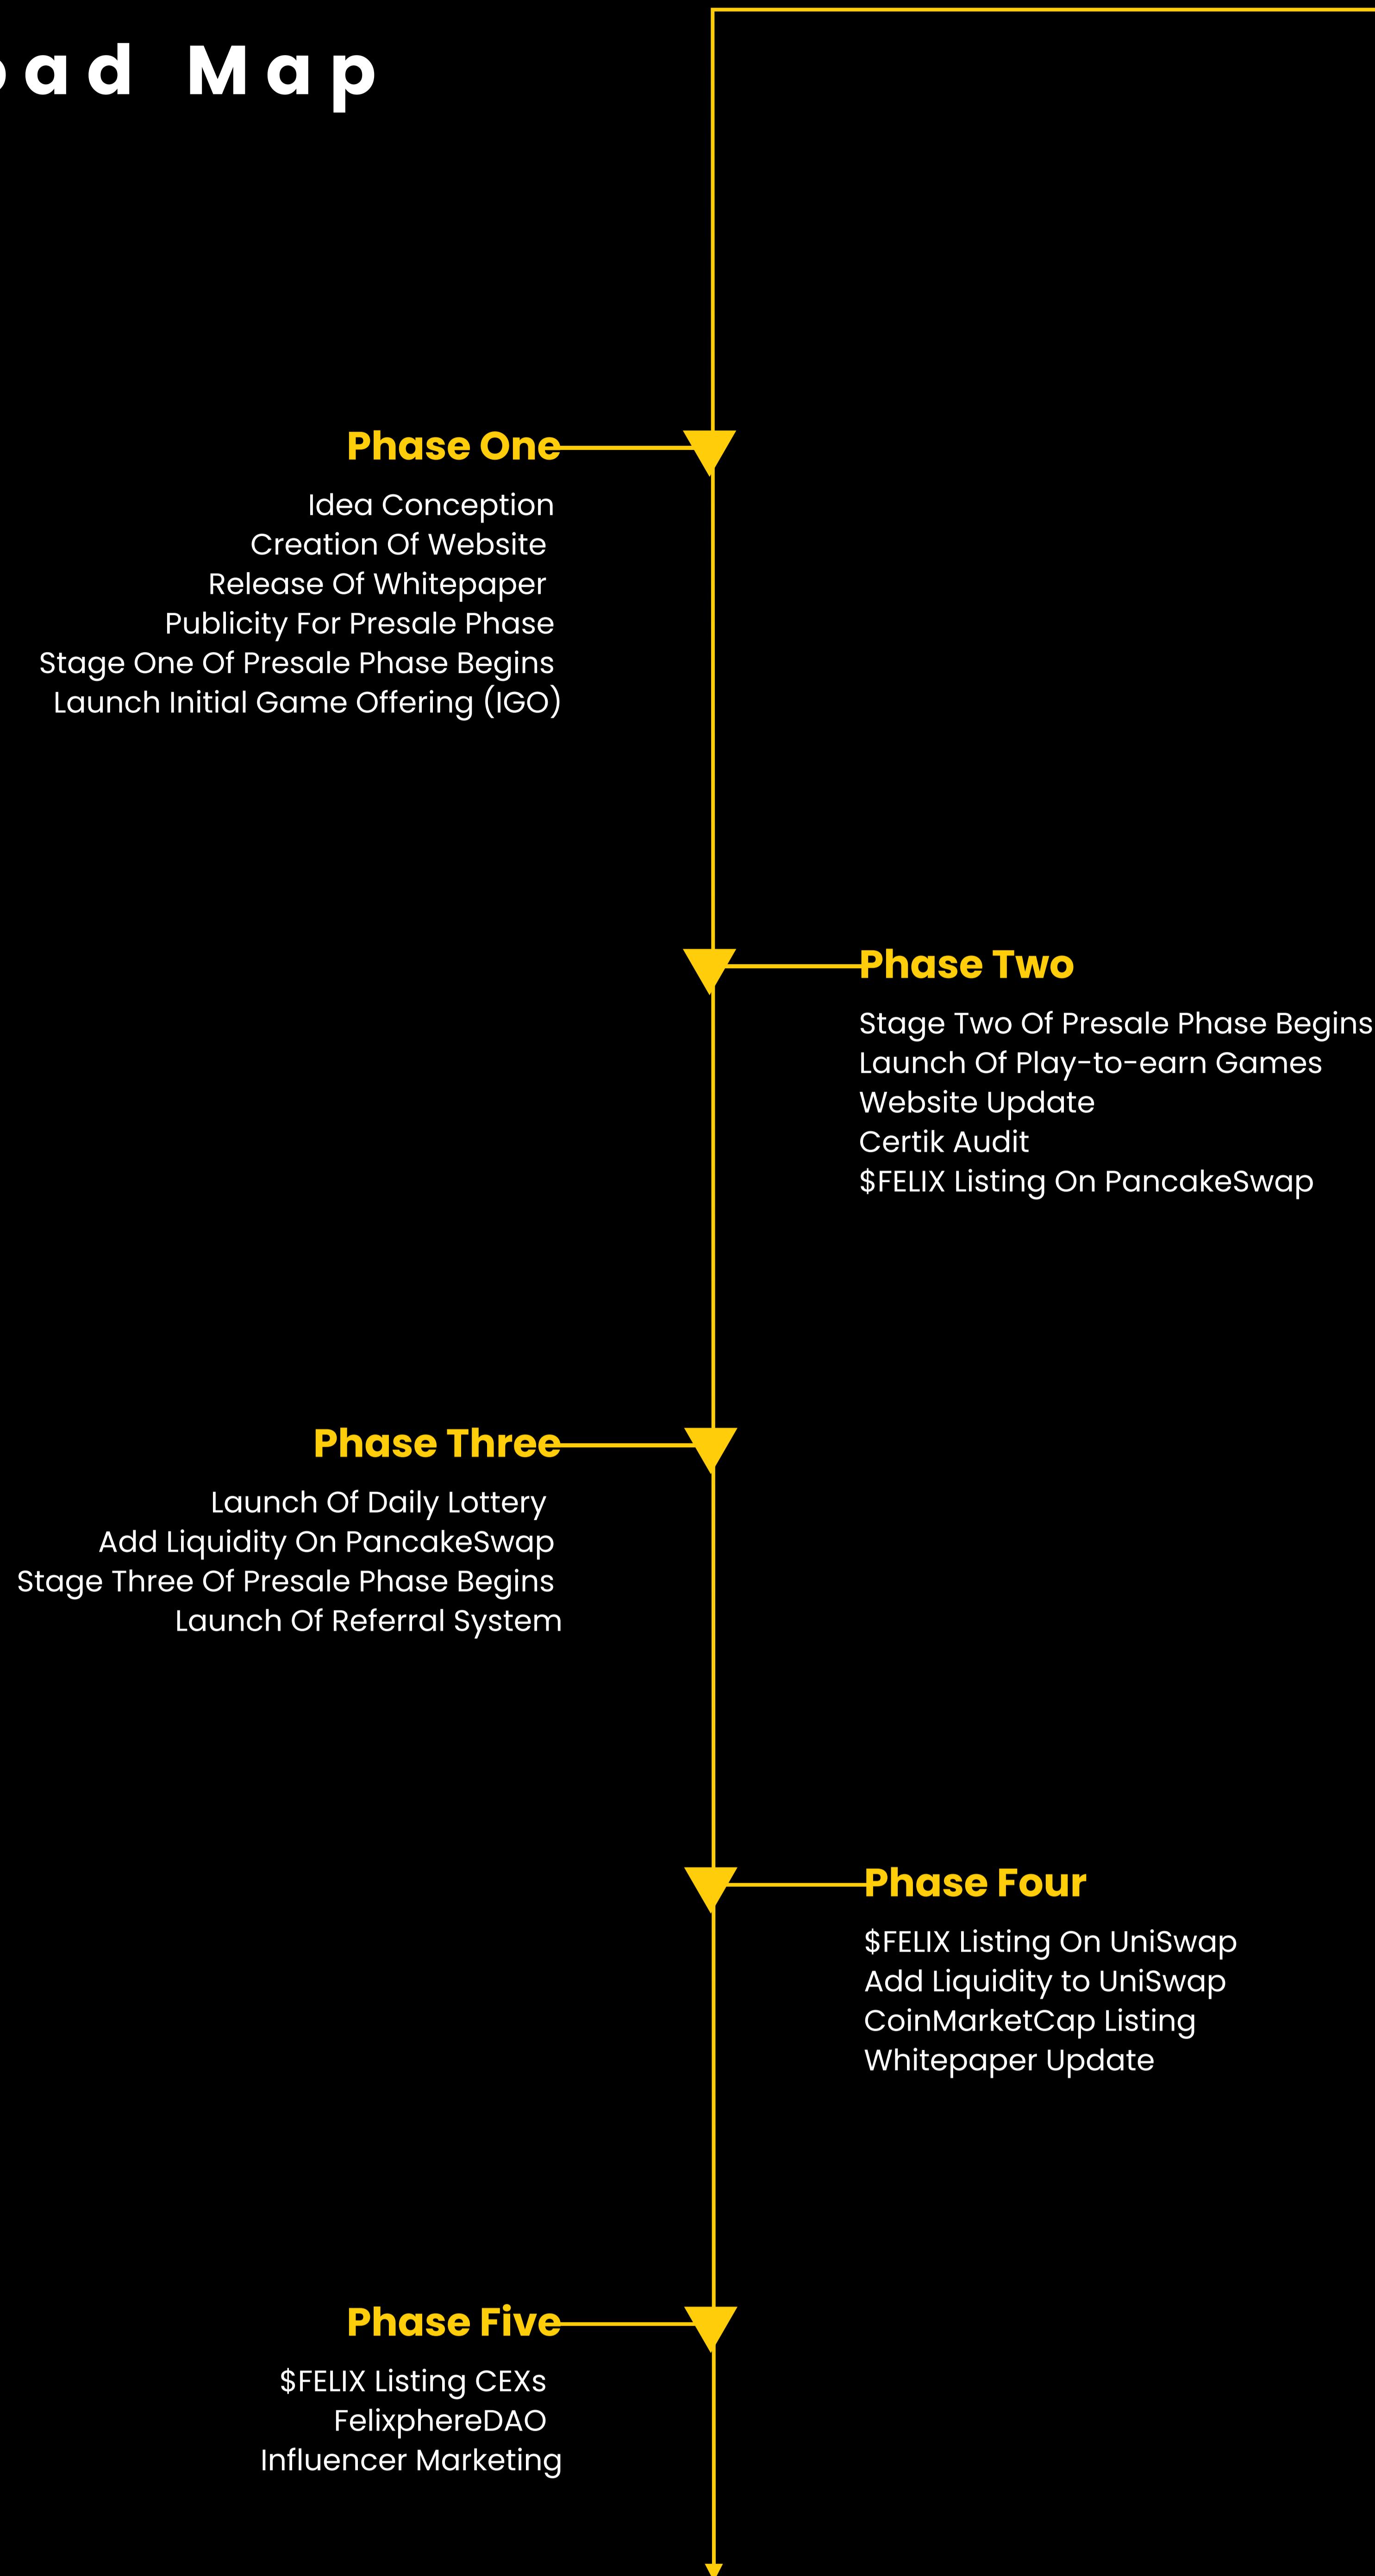

Also, because we believe that our people are at the core of our ecosystem, we want to take their suggestions and concerns very seriously. At the moment, the decision making process is managed by the founding and developers team. However, in the near future we would like to move to a decentralized autonomous organization (DAO) interface.

We want our users to be able to vote on proposals and directly contribute towards the development of the Felixphere ecosystem. We want our network to reflect the choices and wants of the people that engage with it and we want to build a strong community with not just players, but innovators.

It is our belief that if the users of the platform can contribute to its development, we will be able to create a gaming and gambling ecosystem that has never been seen or experienced before.

4.1 Road Map

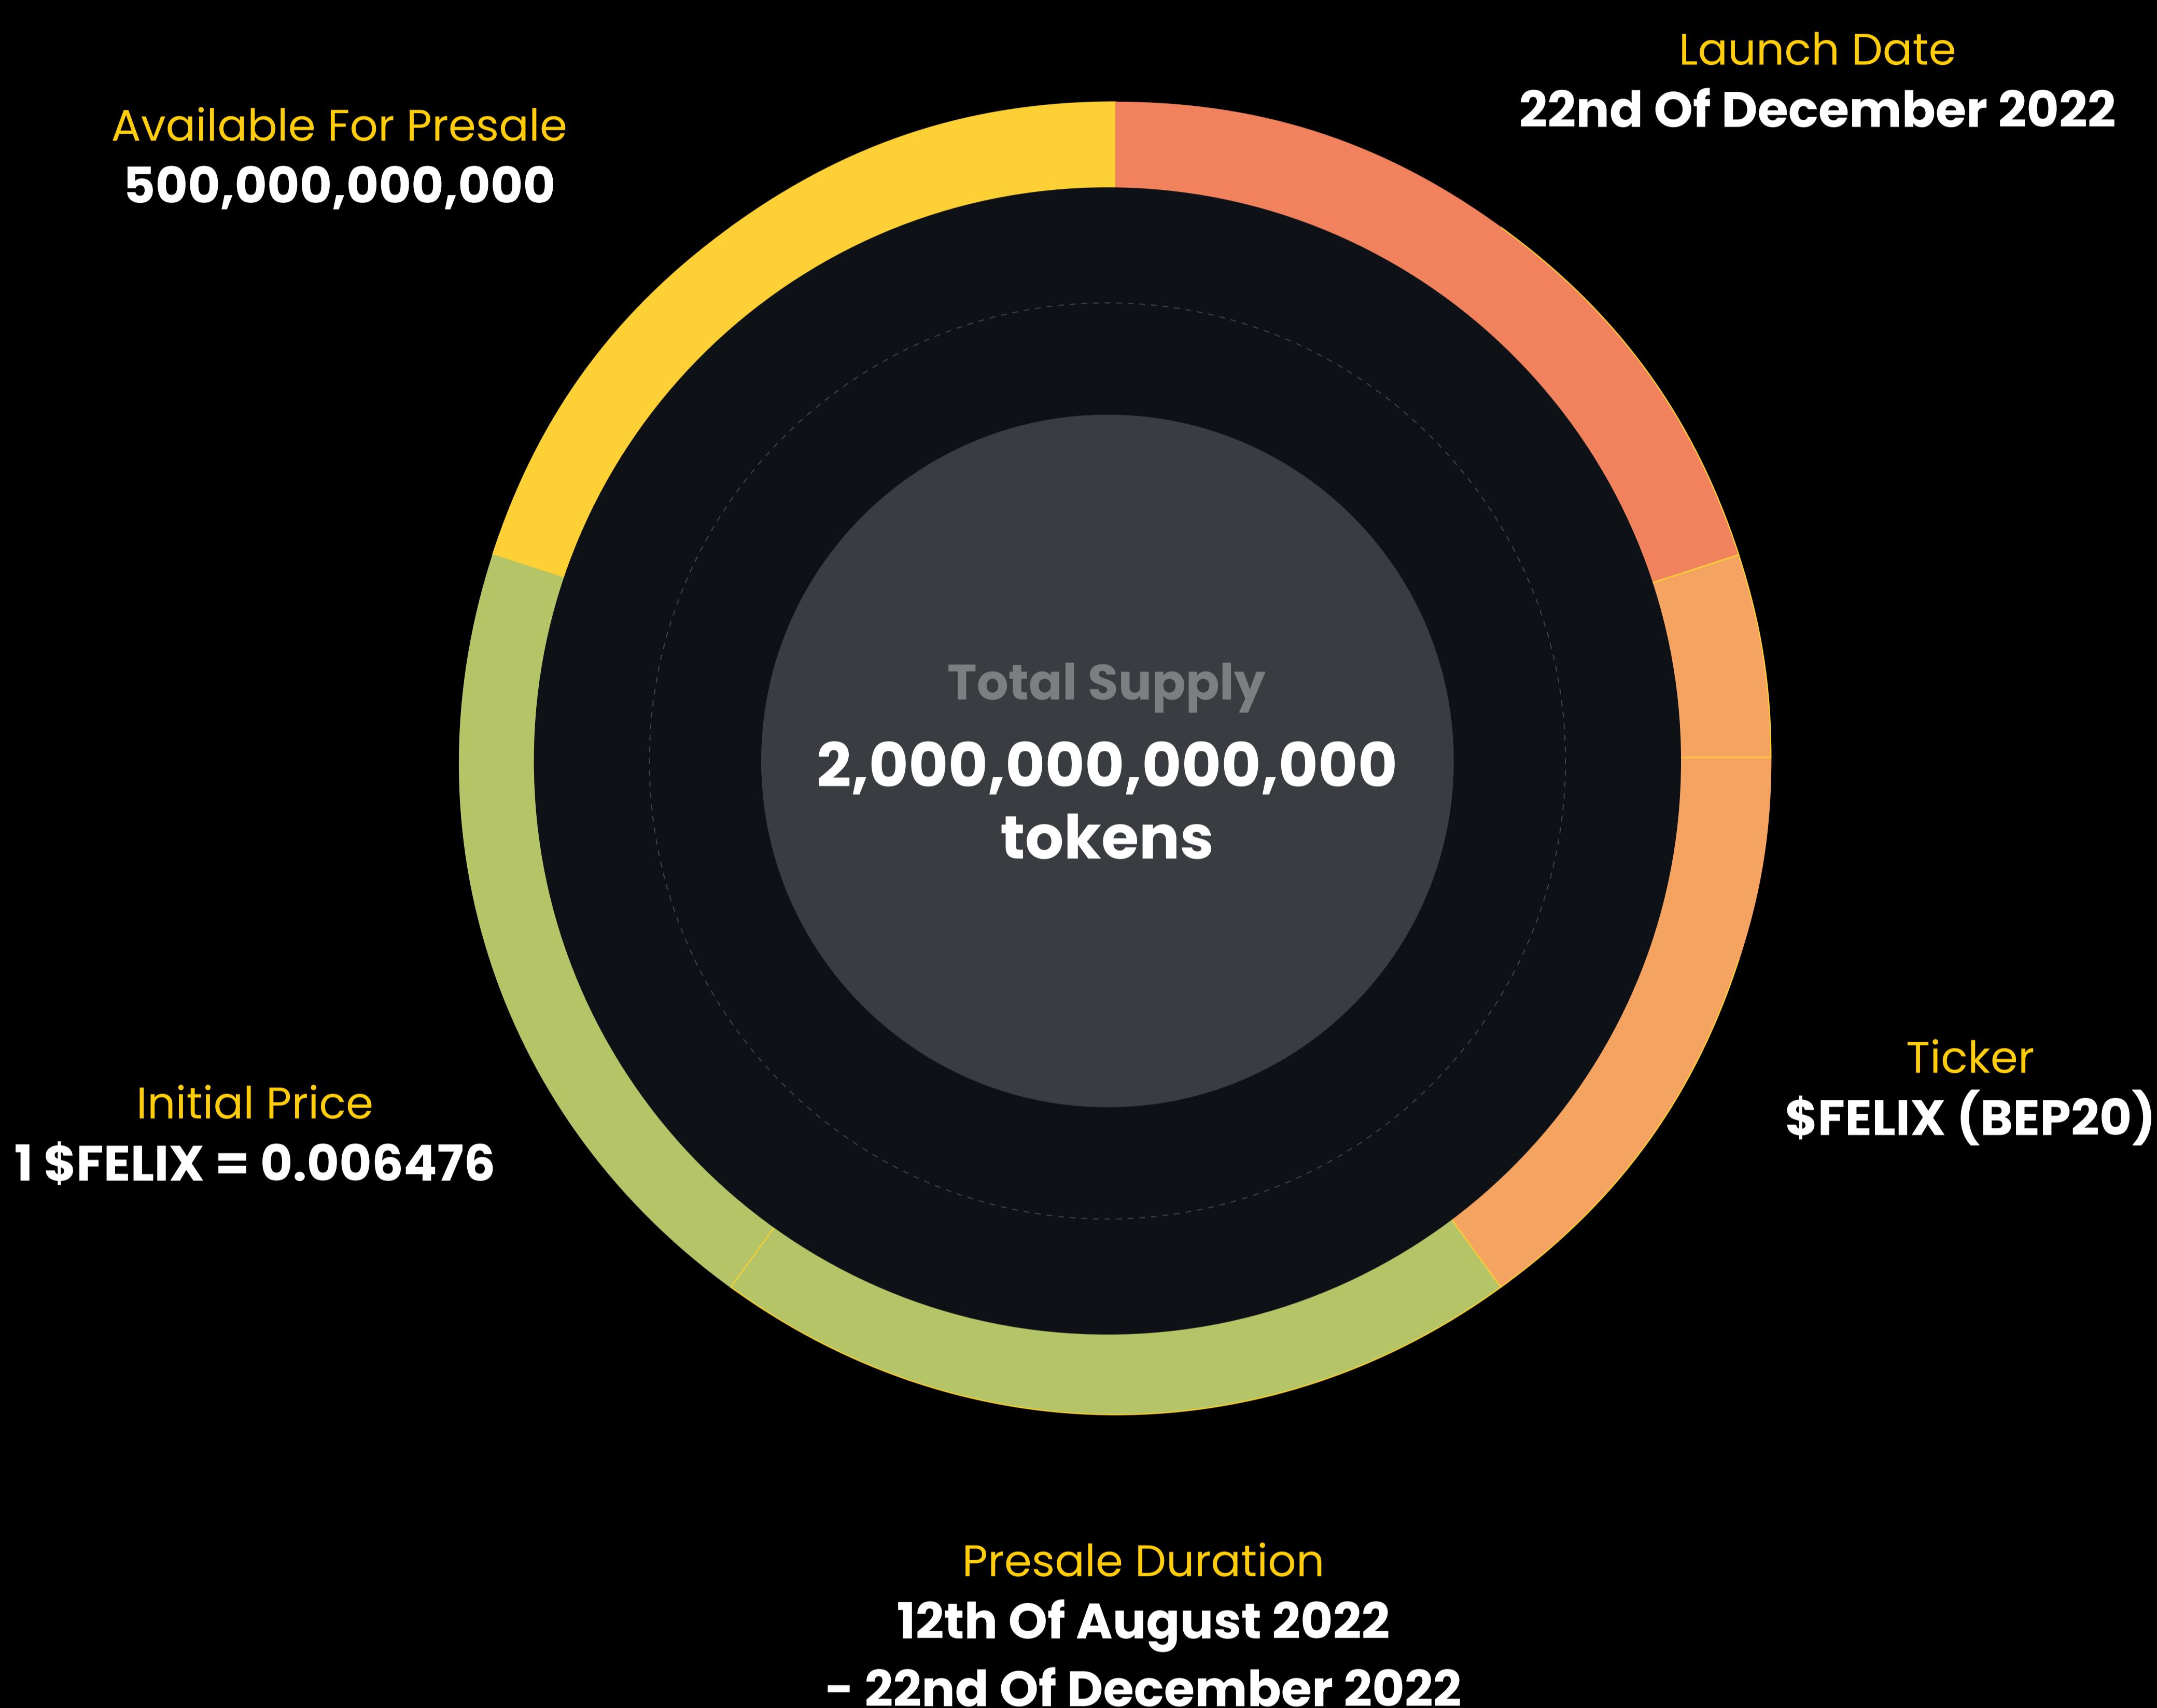

FELIXPHERE

Tokenomics

We wish to create an ecosystem where people can experience the simple pleasures of life again.

There would be a total supply of 2,000,000,000,000 \$FELIX tokens with 25% allocated to the Presale Phases and 25% to the Initial DEXs Offerings.

Game Tax System

For every game, a 10% charge will be removed from the prize pot and it will be distributed thus;

4 % Token Holders Cashback **3 %** Liquidity Pool **3 %** Felixphere Game Contributions

Frequently Asked Questions (FAQs)

How Can I Participate In A Game?

Click on the game that you are interested in and follow the prompts that show up.

How Can I Purchase \$FELIX?

For now, you can purchase the \$FELIX token through our presale website.

How Often Will There Be A Lottery Draw?

Everyday at 16:00 BST, lotto draws on the Felixphere ecosystem will take place.

How Many Tokens Are Available During The Presale Phase?

There will be 500,000,000,000 tokens available in the presale phase but a fixed total supply of 2,000,000,000,000 \$FELIX tokens.

Can I Immediately Access The Tokens I Purchase In The Presale Phase?

No. There will be a two months vesting period for the tokens purchased during the presale phase.

6.0. Signing Out

We are very passionate about bringing the joys of gaming to every nook and cranny of the globe. We want people to experience the carefree, childlike feeling of playing a game, and we want people to enjoy feeling lucky when they win a prize pot. We believe with our extensive research and the experience we have had with these games in the past, we will build an ecosystem that is unbeatable in terms of fun and joy.

We have so much to give to you and we can assure you that your support and trust in our vision will not go to waste.

This is definitely not goodbye as we would be coming back with more information and better updates for the ecosystem and those who are part of it. Until then, this is us signing out for now.
